

GuruDroneAI

The AI classroom operating system

An AI co-teacher that turns lesson material into a live, multilingual, interactive classroom — then simulates it with student personas before you teach.

Create !' Simulate !' Critique !' Refine !' Teach !' Adapt

THE PROBLEM

Teachers still build the whole class by hand

Notes become slides, slides need visuals, visuals need narration, narration needs quizzes — and nobody knows if students will follow until the room goes quiet.

- Hours spent structuring and designing
- Tools stop at “generate a deck”
- No rehearsal of how the lesson lands

THE MISSING LAYER

How will this lesson perform with real students?

Existing AI tools create content. GuruDroneAI creates, tests, conducts, and adapts the classroom experience itself.

CORE LOOP

From upload to adaptive teaching

One continuous loop — not a pile of disconnected tools.

- Create
- Simulate
- Critique
- Refine
- Teach
- Adapt

FEATURE · INGEST

Upload any lesson source

PDFs, Markdown, notes, docs — extracted and split into clean chapter parts ready for the Classroom Director.

- Document AI + local PDF extract
- Structured MD parts
- Teacher-chosen scene count

FEATURE · SCENES

Plan the classroom as scenes

The chapter becomes a sequence of teachable moments — each with narration, slide intent, visuals, and questions.

- ~80% presentation · ~20% video tags
- Approve before generating media
- Director-ready scene pack

FEATURE · PRESENTATIONS

Beautiful pages with paragraphs & images

Presentation-tagged scenes become polished pages — elegant copy plus OpenAI illustrations for classroom screens.

- Paragraph generation
- Educational image prompts
- Ready for the live deck

FEATURE · SIMULATE

AI student personas attend first

Before class, a crew of personas walks the lesson — fast learners, struggling students, shy voices — and surfaces where it will break.

- Classroom-readiness report
- Confusing or boring beats
- Refine before you teach

FEATURE · LIVE

Voice-controlled AI co-teacher

In class, Guru listens. Explain again, switch language, skip ahead, ask the room a question — natural commands, not another toolbar.

- “Explain this in Hindi.”
- Simplify · examples · quizzes
- Navigate scenes live

FEATURE · LANGUAGE

Built for multilingual India

Classrooms where English is not the only voice. Keep science terms; change the explanation language on command.

- Voice as the control layer
- Per-concept language switches
- Inclusive by design

GuruDroneAI

Not another slide generator

An AI classroom that can create, simulate, teach, and adapt — so teachers spend less time building the lesson and more time teaching it.
